EDUCATION

Western University <i>M.E.Sc in Electrical and Computer Engineering</i>	May 2023 - August 2025 London, ON
<ul style="list-style-type: none">Developed a novel multiport formulation and regularization technique for the Delayed Vector Fitting technique, to find efficient macromodels of electrically long multiport systems and improve convergence.Developed and published a novel multiport formulation and method to create instruments for the Vector Fitting-Instrumental Variable technique to find efficient macromodels of systems characterized by noisy frequency responses.Instructed and marked course assessments, such as laboratories project reports and exams as a graduate teaching assistant for ECE 2277 Digital Logic Systems and ECE 3375 Microcontrollers.	
Western University <i>B.E.Sc in Electrical Engineering - With Co-op and Distinction</i>	September 2018 - April 2023 London, ON

WORK EXPERIENCE

General Dynamics Land Systems - Canada <i>Electrical Design Specialist (Internship)</i>	May 2021 - August 2022 London, ON
<ul style="list-style-type: none">Design lead of 3 subsystems of a prototype light armored vehicle.Designed 138 wiring harnesses and cables, circuit protection, grounding schemes, and component selection.Reviewed networking architectures for issues related to hardware compatibility.Performed testing for MIL-STD-461 testing with at the device and vehicle level.	

Western University
Undergraduate Summer Research Internship

- Developed a high impedance fault detection scheme using Mathematical Morphology.

ENGINEERING EXPERIENCE

Western University - Western Formula Racing <i>Grounded Low Voltage Lead</i>	May 2023 - April 2025 London, ON
<ul style="list-style-type: none">Led the design assembly and validation of grounded low voltage system, and supported design and assembly of the high voltage system of an Formula SAE car.Designed and validated system architectures, PCBs, wiring harnesses, and high voltage componentsWork was performed under intense time and resource constraints.	
Western University - Western Engineering Build Team <i>Electrical Team</i>	September 2022 - April 2025 London, ON

Western University - Sunstang Solar Car Team
Low Voltage Lead

- Designed and assembled professional light shows for prop structures under intense time and resource constraints.
- Designed, troubleshoot, and repaired legacy systems for orientation week.

PROJECTS

WFR-24E ECU	
<ul style="list-style-type: none">Main controller for the Western Formula Racing Formula SAE car, based on a Teensy 4.1 development board.The controller interfaces with all the components within the car, such as the motor inverter over CAN.	
WLED Light Controller	
<ul style="list-style-type: none">ESP32 based light controller, utilizing open source WLED software used for light shows.The controller contains 4 powered pixel outputs capable of controlling up to 4048 pixels.	

TECHNICAL SKILLS

Circuit Design	HSPICE, LTSPICE, Altium, KiCAD, PCB Design, RF Design, Signal Integrity Design
Model Generation	Vector Fitting, Transient Simulation, Electromagnetic Simulation
Software	C, Python, MATLAB, RTOS, Linux, Vim, Git, Docker
